

Computer Ethics

CSCI 1101 – INTRODUCTION TO COMPUTER SCIENCE

What is Ethics?

- The moral principles that govern a person's behavior or the conducting of an activity.

Computer Ethics

- A set of principles that regulate the use of computers.

With great power

comes great responsibility.

10 Commandments of Computer Ethics

1. Do not use a computer to harm other people.
2. Do not use a computer to cause interference in other people's work.
3. Do not use a computer to spy on a person's personal data.
4. Do not use a computer to steal.
5. Do not use a computer to spread misinformation.

10 Commandments of Computer Ethics (Cont.)

6. Do not use the software unless you pay for this software. (if not open-source)
7. Do not use someone else's computer resources unless authorized to do so.
8. Do not claim ownership of a work that is the output of someone else's intellect.
9. Before developing software, think about the impact it can have.
10. While using a computer to communicate, be respectful of others.

Hacking

Are all hackers bad or unethical? (quick group discussion)

- White Hat
- Black Hat
- Gray Hat

Internet Security

Protect Yourself from Unethical Hackers

- Avoid exposing personal data on low-security websites.
- Keep your software updated.
- Don't connect to public Wi-Fi you don't trust.
- Never open links in emails or texts sent by unknown persons.
- Make strong passwords and don't reuse passwords.
- Don't download software you don't trust.

Internet Security

Tools Hackers Use

- Phishing
- Spyware
- Malware
- Worms
- Trojan Horse
- DDoS

Thank You
