

\LOOPS

Repetition

Loops

Loops check a condition. If it is **true**, a code block will run. Then the condition will be checked again and if it still returns true, the code block will run again. It repeats until the condition becomes **false**.

/TYPES OF LOOPS

/FOR

If you need to run code a specific number of times, use a `for` loop.

/WHILE

If you do not know how many times you need to run the code, you can use a `while` loop.

/DO... WHILE

The `do... while` loop is very similar to the `while` loop, but has one key difference: it will run the code **at least once**, even if the condition is false.

QUESTION

If you need to repeat the same action(s) exactly 10 times, what kind of loop would you use?

/FOR LOOP

KEYWORD

⋮

CONDITION

⋮

```
for (var i=0; i<10; i++){
```

```
}
```

```
// code to run if condition is true
```
